Open ocean fish-farming sounds good but I don't believe enough has been looked into the effects to native fish and local fisheries. The Gulf of Mexico already suffers from too much nitrogen and introducing tons of fish waste into this already delicate area is VERY dangerous. My God Mississippi beaches are still closed due to causes of excess nitrates in the water. Why would you want to add more? Hold off on this permit.

In addition, the EPA's recent "pulling" of California's waiver from the Clean Air Act is simply moronic.
